

The Department of Mathematics and Statistics at the Université de Montréal invites applications for a post-doctoral fellowship on Bayesian and/or non-parametric Bayesian Statistical Learning.

The funding is provided in large part by the talent-search program provided to Prof. Alejandro Murua by corporate donor funds.

The postdoctoral position could start as early as September 1, 2020. The duration is flexible: from 1 to 2 years. This call is intended for, but not limited to, candidates specializing in Bayesian or non-parametric Bayesian statistical learning, and related areas of applied statistics.

Applicants for the postdoctoral positions starting September 1, 2020 must have obtained their Ph.D. degree by September 1, 2020 but not earlier than September 1, 2017. Appropriate shifts to these requirements apply to later starting dates.

The offered post-doctoral fellowship is strictly a research position and do not involve teaching responsibilities. It carries an annual salary of 60000 Canadian dollars (CAD), with possible extra funding for research travel expenses.

Candidates should e-mail the following application materials to Prof. A. Murua:

- 1) CV
- 2) List of publications
- 3) Research statement
- 4) Two letters of recommendation

Please email all application documents, with the exception of letters of recommendation, in a single pdf file to murua@dms.umontreal.ca with the subject line "PDF Statistical Learning Position". Letters of recommendation can be included in the single pdf file with the application, or can be sent to Prof. A. Murua by e-mail directly from the recommender.

For further information please contact Prof. A. Murua at murua@dms.umontreal.ca.
